

# T-RAPS

TAICHI RACING AIR-BAG PROTECTION SYSTEM

## - Innovative Technology for Racing Leather Suits - T-RAPS (Taichi Racing Air-Bag Protection System) debut!

- ◎ This system is developed by collaboration with Mugen-Denko (No.1 share of air bag system equipped street jacket) to protect back of neck, the weak point of racing suits from impact.
- ◎ This epoch making system will operate when the rider is thrown from the motorcycle.  
The air cushion instantly inflates (within 1/2 second) by carbon dioxide and protect back of neck from serious injury by shake of impact.  
Air bag also protects collar bone from impact by edge of helmet when the neck shakes.
- ◎ RS Taichi succeeded in placing the original unit for T-RAPS inside the neck hump of leather suits by maintaining good shape, natural external appearance, good mobility and comfort.
- ◎ In racing scenes, we have to consider for re-start situations after crash. We cannot give up racing because of the inflation of air bag. Therefore, we developed easy detachable system to re-start the race. It only takes one second to detach the whole unit by yourself!

- Taichi Racing Air-Bag Protection System (T-RAPS)
- Specifications : Air-Bag system/gas cartridge
- Release : September 2007 (Thru W.C.O.S.)
- Retail : Yen 294,000- including 5% consumption tax (w/o tax Yen 280,000- )
