

Leather Glove

Maintenance

We use our hands a lot when operating the motorbike, so it sweats a lot too.

If it is kept wet, deterioration will be faster.

With proper care, it can be used comfortably for a long time.

【About daily maintenance】

● Coat moisturizing oil or cream regularly once two or three months.

After wearing the glove on, spreading oil or cream and soaking in a small amount of oil thinly like washing your hand with soap, please wipe with a dry towel.

● After you use it in rain, dry it by tapping softly with a towel.

Please do not squeeze even if it gets wet a lot. By doing so, the leather fiber will be broken and flexibility will decrease.

● Good for keeping it at a well-ventilated place and please avoid high-temperature and humidity. If kept below the helmet or seat, it will cause wetting and mold.

Safe and easy-to-operate leather glove with original carbon protector.

High protection leather glove

SPS (Scaphoid Protection System) made by KNOX reduces the damage from wrist to shoulder in the event of a traffic accident.

By adopting outer stitching, a sense of unity between the grip and the lever is improved.

It's a high-end model of RS TAICHI street gloves. (RST422 HIGH PROTECTION LEATHER GLOVE)

Wash the gloves with water

We recommend washing the glove with water during the off-season. Gloves absorb much more sweat than riding wear. As it dries and absorbs sweat repeatedly, the oil of the leather decreases. In addition, the spread of bacteria hardens the fibers. The gloves will be easy to break. Even though leather items aren't good at water, it's no problem to wash unless you mistake how to wash.

【How to wash】

● Please use detergent for leathers with a moisturizing ingredient or neutral detergent of liquid type.

Please wash with about 30°C warm water like pushing softly by hands.

Please don't rub strongly.

● After washing, please push the glove by the hands to put out the water soaked in the leather and absorb the rest of the water with a towel.

Please absorb the water evenly so that there is no unevenness.

Stain is caused by the transfer of leather paint to the surface due to wetness, so it's important to absorb evenly.

※ Please use a dedicated towel to prevent color transfer of the paint.

● Before the gloves are completely dry, apply oil or cream and dry in a well-ventilated place out of direct sunlight.

It is recommended to wear gloves when applying to keep the shape.
