About Leather Maintenance

MINK OIL

leather care oil with special ingredients for leather suits and boots

What to prepare

MINK OIL, a sponge (possible to use a kitchen sponge), a towel, water-repellent spray (fluorine-based)

※If you have a brush for leather, a leather cleaner, it's useful to care.

1 How to remove surface dirt

Wipe surface dirt by using a dry towel or a brush for leather.

If there is a corpse of insects, wipe as soon as possible by using a towel wet in water.

If there are no noticeable dirt or wetting, it's enough by those process.

If the dirt could be removed just wiping, wipe it with a leather cleaner on a towel or sponge. Please wipe softly not to damage.

It is also recommended to rub lightly with a plastic eraser to remove a few stains.

2 Coating moisturizing oil

Coat a little moisturizing oil as evenly as possible by using a sponge.

Clopping mesh is too much oil.

It doesn't penetrate the leather well and causes attaching dirt or sticky.

If the mesh is clogged, remove it with a sharp tool and wipe extra oil with a towel.

A racing suit tends to sweat behind the thighs and armpits or cuff and below of knee by overlapping gloves and boots. It tends to be hardened the leather by lacking oil. You can keep it in good condition by wiping these parts with oil in a fast cycle.

3 Penetrating moisturizing oil

After penetrating oil for about 1~2 hours, check by touching the surface to confirm whether there is any oil is left.

If there is oil on the surface, wipe with a dry towel.

Please be careful because it is hard to penetrate oil into the printing parts.

4 Preventing stains

Please spray (water-repellent and fluorine-based) as final care.

In the process, a fluorine film is formed to prevent stains.

Caution about storage

After removing the surface dirt by using a wetting towel or brush to prevent generating mold, please hang on a thick hanger to prevent collapsing the silhouette and storage at the well-ventilated place. It is efficient to cover with breathable non-woven fabric to prevent direct sunlight because leather is weak from ultraviolet rays.

After riding in Rain *Maintenance*

Leather is not strong against wetting. A wetting leather causes transform or hardening due to a lack of necessary oil. If it suddenly rains, please clean it as soon as possible.

Wipe wetness with a dry towel to the outside and inside of the leather-like pushing.

After that, dry at the well-ventilated and shady place.

Caution

Please do not add the heat of a hair dryer or iron to the leather. Be sure to dry naturally, the wind of the electric fan is okay.

Apply moisturizing oil before it dries completely.

Please put a little more than usual.

Inner Liner *Maintenance*

TAICHI racing suit can remove the inner liner to wash separately. By washing the inner liner in a fast cycle, it can be kept clean and prevent sweaty odor in the summer season.

- 1 Remove inner liner from the body
- 2 Remove protectors from the inner liner
- 3 Wash by laundry machine (We recommend using a washing net bag.)
- 4 Dry at the well-ventilated and shady place without direct sunlight

Useful suit cover for carrying or keeping leather suit

Leather suit bag

It is made of soft and breathable non-woven fabric so it's good for carrying or keeping the leather suit. Simple and functional suit cover with diagonal fastener for easily taking in and out and an arm belt to hold the sleeve. (NEB002 LEATHER SUIT BAG)
