## Maintenance

### 1 Preparation

If it has a removable inner and protectors, please remove it. We recommend that you keep the protectors in one place.

### How to wash and storage

We recommend washing textile wear by hands at end of each season.

Washing by hands with a neutral detergent is basic method.

### 2 Washing by hands

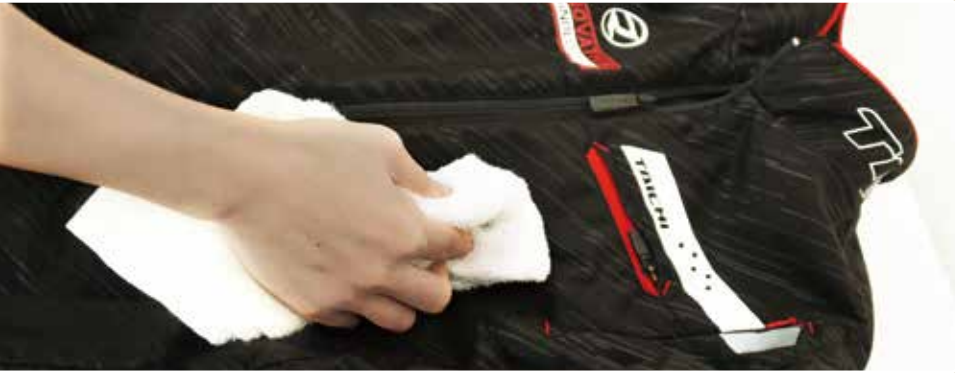

Please use basic neutral detergent and wash by hands. If there is partial dirt, it's good to rub softly with a kitchen sponge.

※Please wash riding pants with the same method.

# Textile Maintenance

## 3 Rinse

Please rinse it well longer than usual.

## 4 Dehydration

After washing, please push out rough water. After that, wipe the rest of the water off with a dry towel like pushing.

## 5 Drying

Please dry it at a well-ventilated and no direct sunlight place.

## 6 Processing of water-repellent

After drying, please spray a fluorine-based water-repellent spray evenly as waterproof and dirt prevention.

## Storage

### Caution about storage

If it is kept and pressed in a clothes case for about half a year, essential layers of air to keep heat retention will decrease by pressed inner cotton.

By doing so, the heat retention effect will decrease and wrinkles will appear on the fabric of the outside.

If the jacket is waterproof fabric, it also may damage the coating or seam tape. After doing these processes to use for a long time, hang it a thick hanger.

Please keep it at a low temperature and no direct sunlight place.
